Coeur d'Alene Tribe
P.O. Box 408
Plummer, Idaho 83851-9703

Re: Notification of Consultation and Coordination on U.S. Environmental Protection Agency Action
on Idaho Water Quality Standards

Dear Chairman Allan:

I am writing to offer to consult with the Coeur d'Alene Tribe on an important Clean Water Act decision regarding water quality standards in the State of Idaho. In early 2012, the U.S. Environmental Protection Agency (EPA) will be approving or disapproving water quality criteria for toxic pollutants adopted by Idaho in 2006. The EPA's action will focus on the establishment of toxic criteria in Idaho at levels to protect human health.

The EPA recognizes its unique legal relationship with Tribal governments as set forth in the United States Constitution, treaties, statutes, executive orders, and court decisions. Government wide and EPA specific policies call for regular and meaningful consultation with Indian Tribal governments when developing policies and regulatory decisions on matters affecting their communities and resources. The EPA's decision will apply to waters in the State of Idaho but will not apply to waters in Indian Country. We recognize the important role and interest of the Tribes' in water quality and human health protection within their reservation and in treaty-protected usual and accustomed fishing areas. Because of the potential effect of our upcoming decision on tribal resources, we would like to ensure that we consider input from Tribal governments in our Clean Water Act decision.

Background and Description of the EPA's Water Quality Standards Action

In 2005, Idaho Department of Environmental Quality (IDEQ) initiated rulemaking to update their toxic human health criteria to reflect EPA's recommended updates to numeric human health criteria for toxics. On July 7, 2006, IDEQ submitted revised human health criteria for EPA review and action. This submittal included 88 updated toxic human health criteria based on the EPA's default fish consumption rate of 17.5 grams per day.

The EPA postponed acting on Idaho's 2006 toxic human health criteria until the Agency evaluated its regional approach to toxics. In July 2008, Idaho Conservation League filed a notice of intent to sue because EPA failed to exercise its mandatory duty to act on Idaho's 2006 water quality standards

submission. In April 2009, the EPA and Idaho Conservation League agreed to a settlement agreement where EPA is required to act on Idaho's 2006 toxic human health criteria no later than early 2012. In the meantime, Oregon adopted new toxics criteria based on a fish consumption rate of 175 grams per day on June 16, 2011. The EPA approved Oregon's revised human health criteria on October 17, 2011.

IDEQ's criteria do not and will not apply to waters on Indian Reservations. The EPA is working with the Coeur d'Alene, Shoshone-Bannock and Nez Perce tribes to address water quality standards and development of toxic criteria for their reservation waters.

This consultation and coordination process will be conducted in accordance with the EPA Policy on Consultation and Coordination with Indian Tribes (www.epa.gov/tribal/consultation/consult-policy.htm). The EPA invites you and your designated consultation representative(s) to participate in this process.

Throughout the Oregon human health criteria revision process, the Agency heard a significant amount of input from Northwest Tribal leaders and staff. Among the key messages we heard are:

- Fish and the consumption of fish are central to tribal culture.
- Many tribes in the Northwest retain rights to gather fish beyond reservation boundaries. Fish gathered in those waters should be adequately protected from toxic pollutants.
- The Columbia River Inter-Tribal Fish Commission Fish Consumption (CRITFC) Survey is sound science and must be considered.
- The CRITFC Survey showed that Tribal members who were surveyed consume fish at a level greater than 17.5 grams per day.
- State human health criteria should provide protection for tribal consumers.
- The EPA needs to take into consideration its Trust responsibility to the Tribes when making water quality standards decisions and addressing this issue.

Prior to our Clean Water Act action for Idaho, the EPA is offering to provide further information to tribal governments and appropriate tribal staff in several forums. EPA will:

- Convene a conference call for interested tribal governments to share information on the EPA's action to be held on December 7, 2011, at 2:30 pm Pacific Time. More details will be provided to tribal contacts on that conference call.
- Convene individual conference calls with Tribal governments on request.

We request that you inform us as soon as possible but no later than November 30, 2011, if you would like to initiate consultation with us on this action. Since EPA is required to take action by early 2012, consultation must be completed by December 15, 2011. If you desire further discussion or consultation prior to EPA's action, please contact Mary Lou Soscia at (503) 326-5873 or soscia.marylou@epa.gov.

We will continue to keep you and your staff informed as the Idaho Water Quality Standards process proceeds and as the EPA takes additional action on revision of toxic criteria to further protect human health for Northwest waters.

Sincerely,

A handwritten signature in dark ink, appearing to read "M. A. Bussell", written in a cursive style.

Consultation & Coordination Plan and Timeline

Background and Description of EPA's Water Quality Standards Action

In 2005, Idaho Department of Environmental Quality (IDEQ) initiated rulemaking to update their toxic human health criteria to reflect EPA's recommended updates to numeric human health criteria for toxics. On July 7, 2006, IDEQ submitted revised human health criteria for EPA review and action. This submission included: cadmium aquatic life criteria, arsenic human health criteria, and 91 updated toxic human health criteria. IDEQ's previous human health criteria were based on a fish consumption rate of 6.5 grams per day. The 2006 submission included revised criteria based on EPA's revised default fish consumption rate of 17.5 grams per day. EPA has approved arsenic and cadmium. Methyl mercury was submitted in August 2005 and was approved by EPA September 2005, based on a fish consumption rate of 17.5 grams per day. IDEQ's criteria do not apply to waters on Indian Reservations. EPA is working with the Coeur d'Alene, Shoshone-Bannock and Nez Perce tribes to address water quality standards and development of toxic criteria for their reservation waters.

EPA postponed acting on Idaho's 2006 toxic human health criteria until the agency evaluated its regional approach to toxics. Oregon adopted new toxics criteria based on a fish consumption rate of 175 grams per day on June 16, 2011. EPA approved Oregon's revised human health criteria on October 17, 2011.

In July 2008, Idaho Conservation League filed a notice of intent to sue because EPA failed to exercise its mandatory duty to act on Idaho's 2006 water quality standards submission. In April 2009, EPA and Idaho Conservation League agreed to a settlement agreement where EPA is required to act on Idaho's 2006 toxic human health criteria no later than January 2, 2012.

Tribal Considerations are Key in this Work Effort

Throughout the Oregon human health criteria revision process, EPA heard a significant amount of input from Northwest Tribal leaders and staff. Among the key messages we heard are:

- Fish and the consumption of fish are central to tribal culture.
- Many tribes in the Northwest retain rights to gather fish beyond reservation boundaries. Fish gathered in those waters should be adequately protected from toxic pollutants.
- The Columbia River Inter-Tribal Fish Commission Fish Consumption (CRITFC) Survey is sound science and must be considered.
- The CRITFC Survey showed that Tribal members who were surveyed consume fish at a level greater than 17.5 grams per day.
- State human health criteria should provide protection for tribal consumers.
- EPA needs to take into consideration its Trust responsibility to the Tribes when making water quality standards decisions and addressing this issue.

We request that you inform us as soon as possible but no later than November 30, 2011, if you would like to initiate consultation with us on this action. Since EPA is required to take action by early 2012, consultation must be completed by December 15, 2011. If you desire further discussion or consultation prior to EPA's action, please contact Mary Lou Soscia at 503-326-5873 or soscia.marylou@epa.gov. We will continue to keep you and your staff informed as the Idaho Water Quality Standards process proceeds and as EPA takes additional action on revision of toxic criteria to further protect human health for Northwest waters.

Sincerely,

Mike Bussell, Director
Office of Water and Watersheds
